

## CLAIMS

- 1           1.     An adhesive roller construction comprising:  
2                 an elongated strip, said strip having a backing layer and adhesive layer  
3                 overlying one side of said backing layer, said strip having a first end, a second  
4                 end and two spaced apart sides, said strip being wound from said first end to  
5                 said second end into a tubular cylindrical roll,  
6                 wherein said backing layer comprises a compressible layer.
  
- 1           2.     The invention as defined in claim 1 wherein said compressible  
2                 layer comprises a foam layer.
  
- 1           3.     The invention as defined in claim 2 wherein said foam layer  
2                 comprises a closed-cell foam layer.
  
- 1           4.     The invention as defined in claim 1 and comprising a release  
2                 agent covering at least a portion of the other side of the backing layer.
  
- 1           5.     The invention as defined in claim 4 wherein said release agent  
2                 comprises silicone.
  
- 1           6.     The invention as defined in claim 1 and comprising an  
2                 antimicrobial coating on said one side of said backing layer.

1           7.     The invention as defined in claim 1 and comprising a fragrance  
2     coating applied to said backing layer.

1           8.     The invention as defined in claim 1 and comprising an antistatic  
2     coating applied to said backing layer.

1           9.     The invention as defined in claim 1 and comprising a plurality  
2     of perforation lines extending between said sides of said strip at predetermined  
3     intervals therealong, said predetermined interval corresponding substantially to  
4     one revolution of said strip around the roll.

1           10.    The invention as defined in claim 1 and comprising a cut  
2     formed through the roll, said cut extending through substantially all layers of  
3     the strip around the roll.

1           11.    The invention as defined in claim 10 wherein said cut terminates  
2     short of each side of said strip.

1           12.    The invention as defined in claim 1 wherein said backing layer  
2     comprises a non-woven electrostatic charge retaining material.

1           13.    The invention as defined in claim 12 wherein said backing layer  
2     comprises polyethylene.

1           14.     The invention as defined in claim 1 wherein said backing layer  
2 comprises a hydrocarbon gas impregnated foam.

1           15.     A detritus removal roller construction comprising:  
2           an elongated strip constructed of a woven, electrostatic charge retaining  
3 material, said strip having a first end, a second end and two spaced apart sides,  
4 said strip being wound from said first end to said second end into a tubular  
5 cylindrical roll.

1           16.     The invention as defined in claim 15 wherein said strip  
2 comprises polyethylene.

1           17.     The invention as defined in claim 1 and comprising a second  
2 backing layer overlying said first mentioned backing layer.
